

ONLINE RESUME BUILDING

AIM:-

The aim of the **Resume Forge** project is to develop a web-based application that helps users create professional and ATS-friendly resumes efficiently. The system provides an easy-to-use interface for entering personal, educational, and professional details while generating a well-structured resume and analyzing its ATS compatibility.

Project Description:-

ResumeForge is an online resume builder and ATS analyzer that enables users to create, edit, and download professional resumes. The platform includes user authentication with OTP verification, a dashboard for managing resumes, a resume-building module with live preview, and an ATS analysis feature that evaluates resume quality and provides improvement suggestions.

Objectives:-

- To simplify the resume creation process.
- To provide a user-friendly interface for resume building.
- To generate professional and ATS-compatible resumes.
- To analyze resume quality using ATS scoring.
- To allow users to download resumes in a professional format.
- To securely manage user profiles and resume data.

Technologies Used:-

Frontend:HTML5,CSS3,Python

Backend: CSS

Database: MongoDB

Authentication: Email OTP Verification

Tools:-Visual Studio Code,Git & GitHub

Software Requirements:-

- Operating System: Windows 10/11, Linux, or macOS
- Web Browser: Google Chrome, Mozilla Firefox, Microsoft Edge
- Code Editor: Visual Studio Code

- Database: MongoDB
- Version Control: Git

Hardware Requirements:-

- Processor: Intel Core i3 or above
- RAM: 4 GB minimum (8 GB recommended)
- Storage: 20 GB free disk space
- Internet Connection: Required for OTP verification and deployment
- Display: 1366 × 768 resolution or higher

System Architecture:-

The ResumeForge system follows a three-tier architecture:

Presentation Layer (Frontend)

- User Interface
- Resume Builder Forms
- Dashboard
- ATS Analysis Display

Application Layer (Backend)

- Authentication Module
- Resume Management Module
- ATS Analysis Engine
- Download Service

Data Layer (Database)

- User Information
- Resume Data
- ATS Reports
- Authentication Records

Project Workflow / Process:-

- **User Registration** :- User creates an account using email and password.
- **OTP Verification** :- OTP is sent to the registered email for account verification.
- **User Login** :- Verified users log in to access the dashboard.
- **Resume Creation** :- Users enter personal, educational, skills, project, and experience details.
- **Live Resume Preview** :- Resume is generated and displayed in real time.
- **ATS Analysis** :-The system evaluates the resume and provides an ATS score with recommendations.
- **Resume Update** :- Users can modify details based on ATS suggestions.
- **Resume Download** :- The final resume can be downloaded and used for job applications.
- **Dashboard Management**:- Users can view profile information, ATS scores, and resume statistics.

Result:-

The ResumeForge project was successfully developed and implemented to help users create professional and ATS-friendly resumes. The system provides secure user authentication through OTP verification, an easy-to-use resume builder, real-time resume preview, and ATS score analysis with improvement suggestions. Users can efficiently create, manage, and download resumes, making the resume-building process faster, simpler, and more effective for job applications.
